A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 8, 9, 14-16, 22, 23 and 28 are rejected under 35 U.S.C. 102(b) as being anticipated by Kajita (2002/0047065 A1).

Kajita discloses an apparatus for disposing a wire lead W along a trajectory having predetermined positional references relative to a dynamo-electric machine component 1 comprising:

a wire lead source 32, 33;

a wire lead manipulator 11, 12, 13 having a longitudinal axis 13 comprising first 15 and second 15a portions and configured to dispose the wire lead along the trajectory at the predetermined positional references (as seen in Figure 1 and 7), the first portion 15 being configured to receive the wire lead from the wire lead source, the second portion 15a being configured to engage the wire lead received within the first portion 15; and

wherein a distal end of the wire lead manipulator exclusively enters a first plane in which the wire lead is to be disposed (dashed lines in Figure 1).

In regards to claim 2, Kajita discloses the first plane is substantially perpendicular to the longitudinal axis 13.

In regards to claim 3, Kajita discloses the distal end of the wire lead manipulator comprises a terminal end of the second portion 15a.

In regards to claim 8, Kajita discloses the wire lead manipulator is configured to be disposed adjacent a second plane from which the wire lead source dispenses the wire lead to receive the wire lead, the second plane being substantially parallel to the longitudinal axis (embodiment of Figure 8).

In regards to claim 9, the wire lead manipulator is pressed against the wire source to receive the wire.

In regards to claim 14, Kajita discloses the wire lead source 32, 33 is a wire dispensing needle configured to wind wire coils onto the dynamo-electric machine component.

With respect to claims 15, 16, 22, 23 and 28, the method described in these claims would inherently result from the use of wire manipulator of Kajita as advanced above.

Allowable Subject Matter

Claims 4-7, 10-13, 17-21 and 24-27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
